

Beat Permanent Water Restrictions!

By choosing an **ESA Envirowater** water saving product you'll be helping to improve your property value by:

- **Keeping your garden looking healthy all year round.**
- **Keeping soil moisture consistent which helps to prevent cracks in pavements & brickwork.**
- **Having the ability to wash your car using your own treated greywater.**
- **Use your greywater to wash laundry and flush toilets.**

All of **ESA's** products are EPA Approved, are easy to use and come with 12 months warranty.

BEATING WATER RESTRICTIONS:
ESA Envirowater is an environmental company offering consumers two forms of water saving methods:

- Greywater Treatment &
- Greywater Diversion.

By using your home's own greywater you'll be able to beat water restrictions without changing your lifestyle!

An ESA Envirowater treatment system installed and running at a home in Canberra

Enviro Water™

Grey water Treatment System

The ESA Envirowater grey water treatment system, is a reliable unit able to treat up to 1000 litres of greywater per day to be stored for later use in and around the home.

Grey water Treatment System

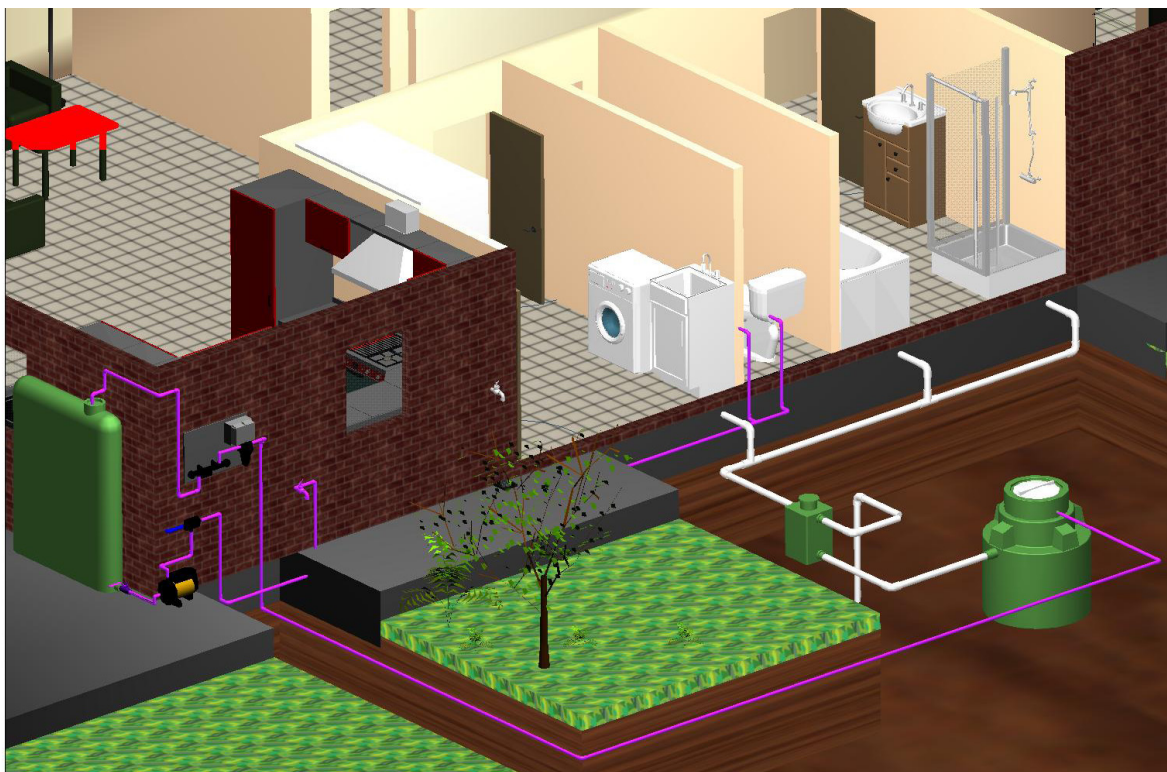

The ESA Envirowater unit is a compact, fully automated, safe system able to produce 'Class A' water, meaning it's able to be stored for later usage. This unit is Victorian **EPA Approved** and allows more water to be stored without the time limits applicable to untreated grey water!

Why Choose ESA Envirowater?

ESA Envirowater products are made by an Australian owned company, with over 15 years experience in the water industry. The team at ESA are committed to the highest levels of workmanship in order to deliver a quality product every time.

What can the treated greywater be used for?

- **Above ground irrigation** - This water is safe to use on all lawns and gardens, it's even safe to use on vegetables!
- **Car washing** - Cars can now look as good as new with water available when needed.
- **Laundry washing** - This process alone can reduce your water consumption by up to 15%.
- **Toilet flushing** - A simple plumbing connection can help you cut your water bill!
- **Storage** - The treated greywater is safe to store in a water/holding tank without becoming putrid.

Grey water Diverter Unit

The ESA Envirowater grey water diverter unit allows you to maintain a healthy garden by keeping your soil moist.

Grey Water Diverter

- **Keep your garden green** - By diverting your laundry and/or shower water to your garden to maintain a beautiful, lush garden all year round.
- **Safe & Easy to use** - The automatic pump disperses grey water straight to your garden & the overflow ensures no spills or leaks.
- **Compact & Stylish** - This unit is available in a 500 litre model or 80 litre as pictured. Available in a range of different colours.

How it works

The ESA Envirowater™ grey water diverter is a compact unit which is able to gather water being dispersed from your laundry and/or shower and divert it to your garden via a drip irrigated hose (not included). The unit complies with EPA limitations on the storage of grey water

Why divert

Diversion is a no fuss, low cost way of re-using valuable water for your garden. Using an **ESA Envirowater** grey water diverter is inexpensive, simple and low maintenance.

Divert your laundry water straight to your garden!

4 Easy Steps to Include Your Grey Water System in Your New Home:

- **Step 1:** Ask your Sales Consultant or Home Decor Consultant to include a provision for either Greywater Treatment or Greywater Diversion in your new home contract.
- **Step 2:** New home construction will begin and include a greywater plumbing provision.
- **Step 3:** ESA Envirowater representative will contact you just before completion of home construction to arrange your system, select colours and consider any other modifications.
- **Step 4:** Once your new home has been completed and you move in, ESA Envirowater will install the desired greywater unit and payment may be made directly to ESA Envirowater.
